

LID

Mythical form. Spherical light.

With LID, serien.lighting continues the formal simplicity of successful products such as SML and APP, adding a circular luminaire that is ideally suited for use in corridors and stairwells and accentuates walls in private homes, hotels, bars and restaurants. On account of the pleasant, calm, and spherical light it emits, LID is also perfect for bathrooms and spas.

From a straightforward illuminant equipped with four LED circuit boards, LID washes walls in even, rotationally symmetric surface light. The extensive flood of light makes the luminaire appear to be floating in front of the wall. In addition, the way the glass edge reflects the light gives rise to subtle, characteristic line of light. An aureole emerges, conjuring up associations with a setting moon.

The front is deliberately conceived not as a light box but as a medium for high-end materials, which blend in with different interiors and architectural contexts; the front disc is available in various versions: genuine opal glass, silver or champagne-colored aluminum, and mirror glass. LID is ideal for use in rows, in a group, or as a single luminaire.

All versions are now available.

LID

LID Wall

material	cooling unit: aluminium; housing: transparent polycarbonate; front: aluminium or glass
lamp	LED Mid Power 16 or 23 W, CRI Ra>90, R9>50, EEL A+ (suitable for A++ to A); LED unit can be replaced on site; other technical versions (CCT/CRI/power) on request
control	TRIAC dimmable with external trailing edge dimmers; DALI or 1-10V
light	smoothly all around to the sides
accessories	mirror adapter
features	110 V versions on request; DALI and 1-10 V versions are suitable for the use in emergency lighting systems
design	Formfjord
